Storm Water Grants

Issue: Approval of storm water grant and loan applications.

Background: At the November 1999 Clean Water Commission meeting, the Commission delegated Staff authority to award storm water grants and loans to cities within first class counties with populations equal to or greater than 25,000. The Commission still approves funding recommendations for first class counties and the Metropolitan St. Louis Sewer District (MSD). The Commission approved \$480,176 in grant funds at the November 1, 2006 meeting.

MSD and all first class counties received "Intent to Award" letters in March 2006 with grant and loan amounts determined by population. The funding was offered from the balance of proceeds from the sale of Storm Water Control Bonds voted in November 1998. The seventeen first class counties are Boone, Buchanan, Callaway, Camden, Cape Girardeau, Cass, Clay, Cole, Franklin, Greene, Jackson, Jasper, Jefferson, Platte, St. Louis, St. Charles and Taney.

The Water Protection Program (WPP) offered \$3,179,568, which was the balance of cash for grants as of February 28, 2006. This balance included recoveries from previous grants and interest earnings. WPP offered \$2,611,049 in loan funds, which consisted of repayments on existing storm water loans and estimated additional repayments through June 30, 2007.

In accordance with the regulations, the counties have formed Storm Water Coordinating Committees that have submitted their recommendations for the distribution of funds within their county. Water Protection Program staff has reviewed these recommendations and request that the Commission approve the grants as indicated by the attached letters from the Coordinating Committees. A summary of the applications follows.
